

Acrylic Paint (Interior & Exterior)

Water-based Acrylic Paint with premium quality resin. Our chemist has formulated coatings for Watty, BASF & companies overseas.

This is premium interior & exterior paint - factory to your door. To keep prices down, we only do lighter colours indoors, but most colours outdoors. The general comment to our paint is it equals or surpasses top bands, at an affordable price.

Primer – Use our Acrylic Primer. Some painters simply dilute paint enough for it to soak into the raw substrate. If you want extra adhesion or the substrate is very porous, rather use our Acrylic Primer. Allow to dry, then roll two coats of our Interior or Exterior Paint undiluted.

Cheap quality paint is a waste of time.

Poor quality paint is mostly powdered filler & water, with a small amount of cheap resin. The water evaporates & there's too little resin to coat all that powder, leaving it porous. That's why it marks or stains easily. When you try wiping off dirt, it shears instead of washing off. Time painting is the biggest expense & cheap paint isn't worth the time, because it just won't stay clean for long.

With the increase in flash flooding, more homes are being flooded. A washable paint will hold back water a lot longer & dramatically reduce damage to the structure of a home. Water soaks straight through cheap paint & damages the wall structure. There is also a higher risk of mould forming.

Textured Paint.

If you want textured paint indoors or outdoors, add sand to our Exterior Paint, to get the finish you like. This gives an attractive finish & is an easy way to thicken paint to cover imperfection in your wall structure.
